

Appl. No. 10/089,135
Amdt. Dated 09/27/2004
Reply to Notice of Non-Complaint Amendment of 10/15/2004

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

Claims 1-24 Canceled

25. (Currently amended) ~~In conjunction with a pneumatic tire having a central tread, a radially-extending belt disposed radially inwardly of the tread and a radially-extending innerliner disposed radially inwardly of the belt, apparatus~~ Combination of electronic tag and patch for mounting ~~an~~ the electronic tag within the ~~a~~ pneumatic tire, characterized by:

~~a~~ the patch having a first side adapted in use for mounting against the ~~an~~ innerliner of the tire, a second arcuately-shaped side and an internally threaded member adapted in use for threadably receiving an externally threaded member having a portion extending from a side of the electronic tag;

wherein:

~~when the electronic tag is attached to the patch when the externally threaded member is threaded into the internally threaded member, the electronic tag is external to the patch, and the side of the electronic tag at least partially abuts the arcuately-shaped side of the patch.~~

26. (Canceled)

27. (Currently amended) Apparatus, according to claim 25, characterized in that:

~~when the externally threaded member is threaded into the internally threaded member, a flat side of the tag is partially in abutment with the arcuately shaped side of the patch~~
~~the side of the tag from which the externally threaded member extends is flat.~~

28. (Currently amended) Apparatus, according to claim 27, characterized in that:

~~when the externally threaded member is threaded into the internally threaded member, approximately one-half of a~~ the flat side of the tag is substantially in abutment with the arcuately-

Reply to Notice of Non-Complaint Amendment of 10/15/2004

shaped side of the patch.

29. (Previously presented) Apparatus, according to claim 25, characterized in that:
the internally threaded member includes a nut.

30. (Currently amended) Apparatus, according to claim 25, characterized in that:
the patch is adapted in use to be mounted to the innerliner adjacent a shoulder portion of
the tire.

31. (Currently amended) Apparatus, according to claim 25, characterized in that:
the patch is adapted in use to be mounted to the innerliner at an area of the innerliner where
the tire is thickest.

32. (Currently amended) Apparatus, according to claim 25, characterized in that:
the patch is adapted in use to be mounted to the innerliner at an area of the innerliner where
the tire is least able to dissipate heat.

33. (Currently amended) Apparatus, according to claim 25, characterized in that:
the patch is adapted in use to be mounted to the innerliner at an area of the innerliner where
the temperature samples are the most closely related to determining whether or not an internal
breakdown of the tire is imminent.

34. (Previously presented) Apparatus, according to claim 25, characterized in that:
the patch comprises vulcanized rubber.

35. (Canceled)

36. (Previously presented) Apparatus, according to claim 25, characterized in that:
the tag is substantially rectangularly-shaped and the side is substantially straight.

Appl. No. 10/089,135
Amtd. Dated 09/27/2004
Reply to Notice of Non-Complaint Amendment of 10/15/2004

37. (Previously presented) Apparatus, according to claim 25, characterized in that:
the internally threaded member includes a nut; and
the externally threaded member includes a bolt.

38. (Previously presented) Apparatus, according to claim 25, characterized in that:
the electronic tag is adapted, in use, to:
sense a first temperature which is the temperature of the tire innerliner adjacent to the belt
edge;
sense a second temperature which is the air temperature within the tire; and
sense air pressure within the tire.

Claims 39-48 Canceled

Please enter the following:

49. (New) A pneumatic tire comprising:
a central tread, a radially-extending belt disposed radially inwardly of the tread and a
radially-extending innerliner disposed radially inwardly of the belt;
further comprising:
a patch having a first side disposed against the innerliner of the tire, a second arcuately-
shaped side and an internally threaded member extending into the arcuately-shaped side;
an electronic tag having an externally threaded member extending from a flat side thereof;
wherein
when the externally threaded member is threaded into the internally threaded member, the
electronic tag is external to the patch, and the flat side of the electronic tag at least partially abuts
the arcuately-shaped side of the patch.

50. (New) Pneumatic tire, according to claim 49, characterized in that:
when the externally threaded member is threaded into the internally threaded member,
approximately one-half of the flat side of the tag is substantially in abutment with the arcuately-
shaped side of the patch.

51. (New) Pneumatic tire, according to claim 49, characterized in that:
the patch is mounted to the innerliner adjacent a shoulder portion of the tire.

52. (New) Pneumatic tire, according to claim 49, characterized in that:

Reply to Notice of Non-Complaint Amendment of 10/15/2004

the patch is mounted to the innerliner at an area of the innerliner where the tire is thickest.

53. (New) Pneumatic tire, according to claim 49, characterized in that:
the patch is mounted to the innerliner at an area of the innerliner where the tire is least able to dissipate heat.

54. (New) Pneumatic tire, according to claim 49, characterized in that:
the patch is mounted to the innerliner at an area of the innerliner where the temperature samples are the most closely related to determining whether or not an internal breakdown of the tire is imminent.

55. (New) Pneumatic tire, according to claim 49, characterized in that:
the patch comprises vulcanized rubber.

56. (New) Pneumatic tire, according to claim 49, characterized in that:
the internally threaded member includes a nut; and
the externally threaded member includes a bolt.
